

PRACTICAL 1

Windows Services and Processes Using Task Manager in Windows 11

Date: _____

2. AIM

To explore Windows processes and services using Task Manager, and learn how to monitor running applications, background processes, and Windows services.

3. OBJECTIVES

- Open and navigate the Windows Task Manager.
- Identify running applications, background processes, and Windows processes.
- View Windows services associated with the operating system.
- Start and stop selected Windows services safely.
- Differentiate between a process and a service.

4. REQUIRED EQUIPMENT/SOFTWARE

- HP All-in-One Desktop Computer
- Microsoft Windows 11
- Administrator account (recommended)
- Keyboard and Mouse

5. STEP-BY-STEP PROCEDURE

Part A: Opening Windows Task Manager

Method 1

- Right-click the Start button.
- Select Task Manager.

Method 2

- Press Ctrl + Shift + Esc simultaneously.

Method 3

- Press Ctrl + Alt + Delete.
- Click Task Manager.

Part B: Viewing Running Processes

- Click the Processes tab.
- Observe the categories: Apps, Background processes, and Windows processes.
- Scroll through the list.
- Identify at least five running applications.
- Record the Process Name, CPU Usage, Memory Usage, Disk Usage, and Network Usage.

Expected Result: The computer displays currently running processes together with their resource utilization.

Part C: Viewing Background Services

- Click the Services tab in Task Manager.
- Observe Service Name, PID (Process ID), Description, and Status (Running or Stopped).
- Identify five running services.
- Record the Service Name, Status, and PID.

Expected Result: The list of Windows services currently installed on the computer is displayed.

6. OBSERVATION AND DISCUSSION

Table 1: Running Processes

S/N	Process Name	CPU (%)	Memory (MB)	Disk	Network
1	Microsoft Edge	1.2	312	0.1 MB/s	0.0 Mbps
2	File Explorer	0.3	98	0.0 MB/s	0.0 Mbps
3	Task Manager	0.8	76	0.0 MB/s	0.0 Mbps
4	Windows Explorer	0.2	105	0.0 MB/s	0.0 Mbps
5	Microsoft Defender	0.5	142	0.2 MB/s	0.0 Mbps

Table 2: Windows Services

S/N	Service Name	PID	Status
1	Windows Update	1268	Running
2	Print Spooler	1140	Running
3	Windows Search	2480	Running
4	DHCP Client	1096	Running
5	DNS Client	1372	Running

7. CONCLUSION

Task Manager was used to examine Windows processes and services, monitor resource usage, and distinguish processes from services.

Note: Process CPU, memory, disk, network values and service PIDs vary by computer and time; the entries above are suitable sample observations.
